Executive Summary

JA Automoveis has a well-designed, well-written website that search engines and AI assistants cannot read. Every one of the eleven routes on jaautomoveis.pt returns the same 460-byte HTML shell whose only text is the title "ja-automoveis" - all content is injected client-side by React, with no server-side rendering or pre-rendering. There is no meta description, canonical tag, Open Graph data or structured data anywhere on the site, robots.txt and sitemap.xml do not exist (the Vercel catch-all rewrite returns the HTML shell with HTTP 200 at those paths), and the homepage has no H1 element at all. Two infrastructure faults compound this: the TLS certificate covers only the apex domain, so visitors reaching www.jaautomoveis.pt see a browser security warning, and the previous domain ja-automoveis.pt still appears in Google results for the brand while returning a Cloudflare 525 error. The opportunity is that the underlying content is genuinely good - the five-question FAQ and the four-step import process are exactly the material answer engines cite - so pre-rendering the site and adding LocalBusiness, Vehicle, FAQPage and HowTo schema would convert existing work into visibility rather than requiring new content.

Dimension	Score	Status	Key Takeaway
SEO	2/10	Needs Work	Content is invisible to crawlers; no titles, descriptions, sitemap or robots.txt exist.
GEO	3/10	Needs Work	No structured data or entity signals; a dead duplicate domain splits brand authority.
AEO	3/10	Needs Work	Strong FAQ and process content exists but carries no schema and never reaches answer engines.
Combined	8/30		Foundation is sound; visibility is blocked at the delivery layer.

Pages Audited

URL	Page Type	Notes
/	Homepage	No H1 anywhere; 15MB autoplay video above fold; 2.85s blocking splash overlay
/stand	Vehicle listing	H1 present; filter results are not indexable URLs (router state, no query params)
/stand/:id	Vehicle detail	H1 present; no Vehicle/Product schema; 3 gallery images lack alt, main image alt="galeria"
/importacao	Service - import	H1 present; excellent 4-step process content; no HowTo schema
/sobre	About	H1 present; team section fully commented out - no named people or credentials
/contactos	Contact	H1 present; full NAP + Google Maps embed; no LocalBusiness schema

URL	Page Type	Notes
/cookies	Cookie policy	H1 present; legal content only
/politica-privacidade	Privacy policy	H1 present; legal content only
/termos-condicoes	Terms	H1 present; states warranty may be 6/12/18/24 months
/login	Login	H2 as top heading, no H1; should be noindex
/admin	Admin (protected)	Auth-gated; should be noindex and disallowed in robots.txt
/robots.txt	Missing	HTTP 200 but returns the HTML shell - file does not exist
/sitemap.xml	Missing	HTTP 200 but returns the HTML shell - file does not exist
/pagina-que-nao-existe	Soft 404 test	HTTP 200 - every nonexistent URL returns the shell, unlimited duplicates

SEO Analysis

Score: 2/10 — Needs Work

Technical On-Page

Signal	Finding	Status
Title tag	A single global title "ja-automoveis" (12 chars, lowercase, no keywords, no location) is served on all 11 routes. No per-page titles exist because no head-management library (react-helmet or equivalent) is installed.	Missing
Meta description	Absent on every page. Google will generate snippets from whatever it can render, or show nothing.	Missing
Server-rendered HTML	All routes return an identical 460-byte shell: <div id="root"></div> plus script tags. Verified via raw HTTP on /, /stand, /sobre and others. Confirmed in source: Vite SPA with no SSR/SSG and vercel.json rewriting /(.*) to /index.html.	Missing
H1 heading	The homepage has no H1 element. Home.tsx composes nine section components and none contains an H1 - the most prominent element is the logo image. All other content pages do have a single H1.	Missing
HTML lang attribute	index.html declares lang="en" while the entire site is Portuguese (pt-PT), targeting Portugal. This misleads language targeting.	Missing
Canonical tag	No canonical link on any page. With soft-200s on every URL and a broken www variant, duplicate-URL risk is high.	Missing
robots.txt	Does not exist. Requesting it returns HTTP 200 with the HTML shell because of the catch-all rewrite - worse than a 404, as crawlers receive HTML where a text file is expected.	Missing

Signal	Finding	Status
sitemap.xml	Does not exist. Same soft-200 HTML response. Vehicle detail pages are therefore undiscoverable except by rendering JS and following links.	Missing
404 handling	Every nonexistent URL returns HTTP 200 with the shell (verified: / pagina-que-nao-existe). This creates an unlimited surface of indexable duplicate pages and wastes crawl budget.	Missing
www canonicalization	The TLS certificate presents CN=jaautomoveis.pt with SAN listing only DNS:jaautomoveis.pt. www.jaautomoveis.pt resolves to Vercel (216.150.1.1) but is not covered, so HTTPS fails with a certificate-name error and http://www 308-redirects into that failure. Visitors typing www see a security warning.	Missing
HTTPS / HSTS	Apex domain serves valid HTTPS with Strict-Transport-Security max-age=63072000, and http:// 308-redirects to https://. Correctly configured.	Good
Viewport meta	Present and correct: width=device-width, initial-scale=1.0.	Good
Open Graph / Twitter Card	No og:title, og:description, og:image or Twitter Card tags. Links shared on WhatsApp, Facebook or Instagram show a bare URL with no preview - significant for a dealership whose audience is social-first.	Missing
URL structure	Clean, readable, Portuguese-language slugs: /stand, /importacao, /sobre, /contactos, /politica-privacidade. Well done.	Good
Internal linking	Navigation uses react-router Link/NavLink, which render real anchor elements, and vehicle cards link to /stand/:id. Crawlable once JS executes.	Good
Indexable filter pages	Brand/model/fuel filters navigate via navigate("/stand", { state: ... }) in HomeFilterBar.tsx, passing router state instead of URL parameters. Filtered views have no distinct URL, so high-intent queries such as "BMW usados Covilha" have no page to rank.	Needs Attention
Image alt text	15 of 19 images have descriptive alt text (logos, brand logos, vehicle cards use marca + modelo). Three public-facing gallery images in VehicleDetails.tsx (lines 195, 211, 218) have no alt, and the main gallery image uses alt="galeria". Minor relative to other issues.	Needs Attention
Page weight / LCP risk	The hero autoplays /videos/jr_stand_vid_compressed.mp4 at 15.2MB with no poster image, and public/imagens contains an 8.4MB PNG. A 2.85-second GarageDoorSplash overlay sets body overflow:hidden on every load, blocking scroll and delaying content. Core Web Vitals could not be measured - the PageSpeed Insights API returned a daily quota error - so run pagespeed.web.dev manually to confirm.	Needs Attention

Content Quality

Signal	Finding	Status
Copy quality	Genuinely strong, original Portuguese copy with a clear value proposition. The /importacao four-step process (Pesquisa a Medida, Inspecao e Historico, Legalizacao e Burocracia, Entrega Chave na Mao) is specific and useful.	Good
Keyword targeting	No page targets a commercial query. "Carros usados Covilha", "stand automoveis Covilha" and "importacao automoveis Alemanha" appear nowhere in any title, description or H1. The competing domain ja-automoveis.pt does use the title "Carros Usados e Semi-Novos Covilha".	Missing
Factual contradiction	Warranty length is stated inconsistently: FAQSection.tsx and /importacao say 18 months, vehicle cards render "Garantia: 24 MESES", and /termos-condicoes says 6, 12, 18 or 24 months. Contradictory facts undermine trust and confuse AI engines that extract specifics.	Needs Attention
Content depth	Most pages sit well under 500 words. There is no blog, no guides, and no location or brand landing pages - so no surface for informational or long-tail queries.	Needs Attention
Freshness signals	No visible publication or update dates anywhere. Vehicle records carry created_at in the data model but it is not surfaced or marked up.	Needs Attention

Structured Data

Signal	Finding	Status
Any schema markup	Zero. A search across the entire src/ tree for application/ld+json and schema.org returns no matches. No Organization, LocalBusiness, Vehicle, Product, BreadcrumbList, FAQPage or HowTo markup exists.	Missing
LocalBusiness / AutoDealer	Absent despite complete NAP being present as plain text (Av. Cidade do Rio de Janeiro, Covilha, 6200-563; +351 961 650 396; jaautomoveis553@gmail.com) and a Google Maps embed resolving to the JA Automoveis place. This is the single highest-value schema for a physical dealership.	Missing
Vehicle / Product / Offer	Absent. The Vehicle type already holds marca, modelo, preco, ano, quilometros, combustivel, transmissao, motor and equipment fields - everything needed for rich results with price and availability, including em_stock to drive InStock/SoldOut.	Missing
Breadcrumbs	No BreadcrumbList markup and no visible breadcrumb trail on vehicle detail pages.	Missing

GEO Analysis

Score: 3/10 — Needs Work

E-E-A-T Assessment

Signal	Finding	Status
Named people / authorship	None. The team section in Sobre.tsx (lines 101-130) is entirely commented out, including the teamMembers array, which held placeholder names and Unsplash stock photos. No founder, staff, credentials or years of experience are published. Removing the placeholders was the right call - but nothing replaced them.	Missing
Business identity	The About page explains values and mission clearly and credibly, but never states who owns or runs the business, when it was founded, or its legal entity name and NIF.	Needs Attention
Contact information	Complete and consistent NAP with a phone disclaimer, email, address, opening hours and an embedded Google Map. Strong.	Good
Trust signals	Warranty terms, Livro de Reclamacoes link and transparency commitments are present. However there are no customer reviews or testimonials on the site, no certifications and no press mentions - despite Instagram (@ja_automoveislda) advertising over 200 customer stories.	Needs Attention
Social profiles / sameAs	No links to Instagram or Facebook anywhere on the site, and no Organization schema to declare them via sameAs. Both profiles exist and are active, so this is a free entity-graph connection being left on the table.	Missing
Duplicate brand domain	The former domain ja-automoveis.pt is still indexed and ranks for the brand with the title "Inicio - JA Automoveis - Carros Usados e Semi-Novos Covilha", but now returns Cloudflare HTTP 525 (origin TLS handshake failure). Brand authority and any earned links are split between two domains, one of which is broken.	Missing

Content for AI Synthesis

Signal	Finding	Status
Crawlability for AI engines	The decisive GEO issue. Google can sometimes render JavaScript, but most AI crawlers (including GPTBot, ClaudeBot, PerplexityBot and Google-Extended) largely do not execute JS. They receive 460 bytes containing the word "ja-automoveis". The site is effectively a blank page to answer engines.	Missing
Factual density	Once rendered the content is reasonably specific (18-month warranty, financing to 120 months, sourcing from Germany and the Netherlands, ISV and inspection B handling). Good citable material that never reaches the crawler.	Needs Attention
Entity clarity	The brand name is used consistently as "JA Automoveis" throughout. However with no Organization schema, no sameAs links and a competing domain, engines have no unambiguous entity anchor.	Needs Attention

Signal	Finding	Status
Stock / inventory data	Vehicle data lives in Supabase and renders client-side only. No feed, no schema, no static pages - so no AI engine can answer "what cars does JA Automoveis have in stock".	Missing
Originality / point of view	The import service is a real differentiator with a clearly articulated process. This is the strongest asset for AI citation once it is made machine-readable.	Good

Technical GEO

Signal	Finding	Status
HTTPS	Valid on the apex domain with long-lived HSTS.	Good
Crawler directives	No robots.txt means no ability to explicitly allow or disallow AI crawlers, and no sitemap pointer. Nothing is blocked, but nothing is guided either.	Missing
Rich schema types	None present, so advanced types (Author, SpeakableSpecification, AggregateRating, Dataset) are moot until baseline schema exists.	Missing
Hosting / delivery	Vercel edge with CDN caching (X-Vercel-Cache: HIT) and correct compression. Solid technical base to build on.	Good

AEO Analysis

Score: 3/10 — Needs Work

Featured Snippet Eligibility

Signal	Finding	Status
Question-phrased headings	The FAQ uses five natural-language questions, including "Como funciona exatamente o vosso servico de importacao?" and "A JA Automoveis oferece garantia nos carros usados?". Exactly the right pattern.	Good
Direct answer paragraphs	FAQ answers are concise, self-contained and close to the ideal 40-60 word snippet length. Strong raw material.	Good
Snippet extractability	None of it is in the served HTML, so no answer engine or featured-snippet crawler that does not run JS can extract any of it. The content qualifies; the delivery does not.	Missing
List content	The /importacao page has a clean numbered four-step process plus a six-item commitment list - ideal list-snippet and HowTo material.	Good
Table content	No comparison tables. A specification table on vehicle detail pages (engine, km, fuel, transmission, year) would be natural and snippet-eligible.	Needs Attention

Signal	Finding	Status
Definition patterns	No page opens with a plain "JA Automoveis is a ... in Covilha" style sentence that engines can lift as a definition.	Needs Attention

Structured Answer Formats

Signal	Finding	Status
FAQPage schema	Absent, despite five ready-made question-and-answer pairs sitting in FAQSection.tsx. This is the single fastest AEO win available.	Missing
HowTo schema	Absent, despite a genuine four-step import process already written and ordered on /importacao.	Missing
Speakable schema	Not present. Relevant for voice queries such as "stand de carros perto de mim" once baseline markup exists.	Missing
Accessible FAQ markup	FAQ answers are rendered in a JS accordion. Ensure answer text is present in the DOM rather than mounted only on click, so it is extractable after pre-rendering.	Needs Attention

Voice Search Readiness

Signal	Finding	Status
Conversational tone	Copy addresses the reader directly in natural Portuguese and reads well aloud.	Good
Local signals	Consistent NAP, a Google Maps embed matching the JA Automoveis place, Covilha and the 6200-563 postal code mentioned in text, and a national-mobile-rate phone disclaimer. Good foundation, unmarked-up.	Needs Attention
Google Business Profile alignment	A Maps place exists for the business. Claiming and fully populating the profile, then matching it exactly to on-site NAP and linking the site, is the highest-leverage local action for a dealership.	Needs Attention
Long-tail coverage	Beyond the five FAQ items there is no content answering questions such as import cost, ISV calculation, retoma valuation or financing eligibility - all high-intent queries this business could own.	Needs Attention

Priority Recommendations

Ordered by urgency. The first item is a hard prerequisite: until crawlers receive rendered HTML, the remaining on-page work cannot register.

Priority	Issue	Dimension	Effort	Impact
Critical	Serve real HTML to crawlers. Add pre-rendering or SSR - vite-plugin-prerender / vite-react-ssg for the static routes, or migrate to Next.js. Until a crawler receives content instead of a 460-byte shell, nothing else in this report can take effect.	SEO / GEO / AEO	High	Critical

Priority	Issue	Dimension	Effort	Impact
Critical	Add unique per-page titles and meta descriptions. Install react-helmet-async (or equivalent) and set them for all 11 routes, plus dynamic titles for vehicle pages, e.g. "Hyundai I20 2022 Gasolina - 18 500 EUR JA Automoveis Covilha". Replace the global "ja-automoveis" title.	SEO	Medium	Critical
Critical	Fix the www certificate. www.jaautomoveis.pt is not in the TLS SAN, so visitors typing www get a browser security warning. Add www as a domain in Vercel and 308-redirect it to the apex.	SEO	Low	Critical
Critical	Create robots.txt and sitemap.xml as real files in public/, and adjust the vercel.json rewrite to exclude them so they are not swallowed by the catch-all. Submit the sitemap in Google Search Console.	SEO / GEO	Low	High
High	Resolve the duplicate domain. ja-automoveis.pt still ranks for the brand while returning HTTP 525. Restore it briefly and 301-redirect every URL to the matching jaautomoveis.pt page to consolidate authority, or release it deliberately - but do not leave a broken domain ranking for your name.	SEO / GEO	Medium	Critical
High	Add an H1 to the homepage stating the offer and location, e.g. "Carros Usados e Semi-Novos na Covilha". The page currently has no H1 at all.	SEO	Low	High
High	Return real 404s. Every unknown URL currently responds HTTP 200 with the shell, creating unlimited indexable duplicates. Add a catch-all route with a proper 404 status and noindex.	SEO	Medium	High
High	Implement LocalBusiness / AutoDealer schema with the existing NAP, opening hours, geo coordinates, logo and sameAs links to Instagram and Facebook. Highest-value markup for a physical dealership.	GEO / AEO	Low	Critical
High	Implement Vehicle + Offer schema on detail pages. Every required field already exists in the Vehicle type - map em_stock to InStock / SoldOut and preco to the offer price for rich results.	SEO / GEO	Medium	High
High	Fix html lang. Change lang="en" to lang="pt-PT" in index.html - the site is entirely Portuguese and targets Portugal.	SEO	Low	Medium
High	Cut the hero video weight. 15.2MB autoplaying with no poster is a likely LCP failure on mobile. Add a poster image, serve a shorter compressed clip or a static hero on mobile, and lazy-load the video.	SEO	Medium	High
Quick Win	Add FAQPage schema to the five existing FAQ questions. The content is already written - this is markup only, and the fastest path to answer-engine visibility.	AEO	Low	High
Quick Win	Add HowTo schema to the existing four-step import process on /importacao. Again, content already exists.	AEO	Low	High

Priority	Issue	Dimension	Effort	Impact
Quick Win	Add Open Graph and Twitter Card tags with a branded og:image. Shared links currently render as bare URLs, which matters for an Instagram- and WhatsApp-driven audience.	SEO / GEO	Low	Medium
Quick Win	Resolve the warranty contradiction. FAQ and /importacao say 18 months, vehicle cards show 24 MESES, terms say 6/12/18/24. Pick the accurate framing and apply it consistently.	GEO / AEO	Low	Medium
Quick Win	Link Instagram and Facebook from the header or footer. Both profiles are active but unlinked, costing a free entity-graph connection.	GEO	Low	Medium
Quick Win	Add alt text to the three gallery images in VehicleDetails.tsx (lines 195, 211, 218) and replace alt="galeria" with marca, modelo and year.	SEO	Low	Low
Quick Win	Add noindex to /login and /admin, and disallow them in robots.txt.	SEO	Low	Low
Medium	Reconsider the 2.85s splash overlay. GarageDoorSplash blocks scroll via body overflow:hidden on every load. At minimum show it once per session via sessionStorage, and never on first paint for crawlers.	SEO	Low	Medium
Medium	Make filters indexable. HomeFilterBar passes router state instead of URL params, so filtered views have no URL. Move to query strings or paths such as /stand/bmw to create pages that can rank for "BMW usados Covilha".	SEO / AEO	High	High
Medium	Restore a real team section on /sobre with actual names, roles, photos and experience. The placeholder version is commented out; named people with credentials are a primary E-E-A-T signal.	GEO	Medium	High
Medium	Publish customer reviews on-site. Instagram references over 200 customer stories; surfacing them with Review/AggregateRating markup converts existing social proof into a ranking and citation asset.	GEO / AEO	Medium	High
Medium	Claim and fully populate the Google Business Profile, matching on-site NAP exactly. For a local dealership this often outweighs on-page work for map-pack and voice visibility.	AEO / GEO	Low	Critical
Medium	Add a specification table to vehicle pages (engine, km, fuel, transmission, year) - useful to buyers and eligible for table snippets.	AEO	Low	Medium
Medium	Build informational content answering real queries: import cost and ISV, retoma valuation, financing eligibility, buying-used checklists. This is the only route to long-tail and AI-citation volume.	AEO / GEO	High	High

Priority	Issue	Dimension	Effort	Impact
Medium	Measure Core Web Vitals properly at pagespeed.web.dev - the PageSpeed Insights API hit its daily quota during this audit, so performance scores here are inferred from asset weights rather than measured.	SEO	Low	Medium

What's Working Well

Clean, semantic URL structure

Portuguese slugs like /stand, /importacao, /sobre and /politica-privacidade are readable and keyword-relevant - no parameters or gibberish IDs in navigation paths.

Genuinely strong original copy

The mission, guarantee and import sections are specific and well written, not filler. The /importacao four-step process is the kind of content competitors usually lack.

FAQ already in the right format

Five natural question-phrased headings with concise, self-contained answers - the exact structure featured snippets and answer engines reward. It only needs schema and server rendering.

Complete and consistent NAP

Address, phone with national-mobile-rate disclaimer, email, opening hours and a Google Maps embed resolving to the correct place - a solid local foundation.

Crawlable internal linking

Navigation uses react-router Link/NavLink rendering real anchor elements, and vehicle cards link to canonical /stand/:id paths - no JS-only click handlers in primary navigation.

Solid hosting and HTTPS

Vercel edge delivery with CDN cache hits, valid apex certificate, two-year HSTS and correct http-to-https 308 redirects.

Rich vehicle data model already in place

The Vehicle type carries marca, modelo, preco, ano, quilometros, combustivel, transmissao, motor and five equipment fields - everything Vehicle/Offer schema needs, with no data work required.

Placeholder team data was removed, not published

The commented-out team section held stock names and Unsplash photos. Choosing not to ship fake staff protected credibility - the fix is real people, not reinstating placeholders.

Active social presence to connect

Instagram @ja_automoveislda and a Facebook page are live and referencing 200+ customer stories - existing authority waiting to be linked into the site entity graph.

Glossary

Term	Definition
SEO - Search Engine Optimization	Optimizing so traditional search engines like Google can crawl, understand and rank your pages. Covers titles, meta descriptions, headings, site structure, speed, sitemaps and structured data. This is the foundation - if crawlers cannot read the page, nothing else works.
GEO - Generative Engine Optimization	Optimizing to be cited by AI systems that synthesize answers - ChatGPT Search, Perplexity, Google AI Overviews, Claude and Gemini. These rely heavily on raw HTML and structured data, and mostly do not execute JavaScript, so a client-rendered site is often invisible to them. GEO also rewards clear entity identity, named expertise and consistent facts.
AEO - Answer Engine Optimization	Optimizing to be the direct answer in featured snippets, People Also Ask boxes and voice assistants. Depends on question-phrased headings, concise 40-60 word answers, lists and tables, and FAQPage/HowTo schema so engines can extract a single confident answer.
Why all three matter here	For a local dealership the same fix serves all three: server-rendered HTML with LocalBusiness, Vehicle, FAQPage and HowTo schema makes pages rankable by Google, citable by AI assistants and extractable as direct answers - from content that already exists on the site.
